DETAILED ACTION

- 1. Claims 1-11 & 13-19 are pending in the application.
- 2. Claim 12 has been canceled.

Allowable Subject Matter

- 3. Claims 1-11 & 13-19 and re-numbered as claims 1-18 respectively are allowed.
- 4. Claims 1-11 & 13-19 and re-numbered as claims 1-18 respectively are allowable over the prior art of record because the cited references do not contain the specified limitation of a device for controlling a system time clock (STC) signal of an MPEG decoder comprising: a first subtractor receiving a plurality of program clock reference (PCR) values and a plurality of STC values, and outputting first gap values being a difference between a respectively received PCR and STC values; a controller determining whether a current PCR value has been updated two or more times; a plurality of difference (DIF) registers storing successively output first gap values of the first subtractor if the current PCR value has not been updated two or more times under the control of the controller; a second subtractor calculating a second gap value being a difference between a current output value of the first subtractor and the first gap value previously stored in the plurality of DIF registers if the PCR value has been updated two or more times. and storing successively calculated second gap values in a plurality of gap registers; a mean calculator calculating a mean value of the second gap values stored in the gap registers and outputting an output value; an LPF/gain controller processing the output value from the mean calculator by performing low pass

filtering and gain control; a voltage controlled oscillator outputting a clock signal having a desired frequency by receiving a value from the LPF/gain controller; and a temporary STC counter counting based on the clock signal, to output the STC value to the first subtractor.
